

What is at the core of any new and modern venture?
IP: the cornerstone that drives sustainable growth.
Tyner Group's cloud product and service array is the
solution that the market has been missing.

Why focus on IP?

Because early stage companies most times do not.
Today, passively participating in the intangible market is not enough;
it is now necessary to secure IP assets for the long-term.

With the right resources, professionals can ensure that their digital
and offline labor is successfully protected, monetised and leveraged.

At the heart of any entrepreneur is invention.

And in this process, is the competitive force of creation.

Nurturing human capital towards establishing strong IP portfolios
is the vision behind Tyner Group's commitment to companies of all shapes and sizes.

We believe that this approach is not an option, but a requirement in
the building blocks that any business must execute.

What positions Tyner Group so well in assisting in the optimisation of IP?

An international knowledge base, with a creative touch that
powers continuous, profitable execution.

Both niche and general, our platform is at the leading edge.

The exponential trajectory of digital enterprise, and the lack
of attention to intellectual property, particularly in the agile arena,
makes this an ideal choice for entrepreneurs and managers alike, to take
part in what could be the largest opportunity of value generation in the history
of this market- welcome to the new era of intangible innovation with Tyner Group.
